Publication No. US20050031633A1

GENERAL INFORMATION:

APPLICANT: Buith, Daniel J.

APPLICANT: Taubman, Martin A.

TITLE OF INVENTION: Glucan Binding Protein and Glycosyltransferase Immunogens

TITLE OF INVENTION Glucan Binding Protein and Glycosyltransferase Immunogens

TITLE OF INVENTION NUMBER: US/10/797,821

CURRENT FILING DATE: 2004-03-09

PRIOR APPLICATION NUMBER: 60/363,209

PRIOR PELICATION NUMBER: 60/363,209

PRIOR PELICATION NUMBER: 60/402,483

PRIOR FILING DATE: 2002-08-08

PRIOR FILING DATE: 1999-04-12

PRIOR FILING DATE: 1999-04-12

PRIOR FILING DATE: 1999-04-13

PRIOR FILING DATE: 1998-04-13

Publication No. US20050031633A1

GENERAL INPORMATION:

APPLICANT: Smith, Daniel J.

APPLICANT: Taubman, Martin A.

TITLE OF INVENTION: Glucan Binding Protein and Glycosyltransferase Immunogens

FILE REFERENCE: 25669-020

CURRENT APPLICATION NUMBER: US/10/797,821

CURRENT PILING DATE: 2004-03-09

PRIOR APPLICATION NUMBER: 60/363,209

PRIOR FILING DATE: 2002-03-07

PRIOR FILING DATE: 2002-08-08

PRIOR FILING DATE: 2002-08-08

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

### ALIGNMENTS

Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen. Streptococcus mutans glucan binding protein-B peptide fragment. ADD93630 standard; peptide; 20 AA. 07-MAR-2003; 2003WO-US006962. 07-MAR-2002; 2002US-0363209P. 08-AUG-2002; 2002US-0402483P. (first entry) Taubman MA; Streptococcus mutans. (FORS-) FORSYTH INST. WPI; 2003-845091/78. WO2003075845-A2 29-JAN-2004 18-SEP-2003. Smith DJ, ADD93630; RESULT 1 ADD93630 

Claim 11; Page 10; 49pp; English.

The present sequence is that of a peptide comprising amino acid residues 88-107 of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SX23 ADD93649. The peptide binds to a major histocompatibility complex (MHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was used to search the primary amino acid sequence of GbpB for known MHC class II binding motifs. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides covalently linked with peptide subunits (preferably from the catalytic domain) of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MrC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising a fragment of a glucan binding protein-B (dppB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

protein B (GDpB) of Streptococcus mutans strain SK32. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The includes a number of human leucocyte antigen (HLA)-binding epitopes. The caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GDpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in
                                                        Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                     The present sequence is the protein sequence of the glucan binding

(FORS-) FORSYTH INST

Taubman MA; Smith DJ,

2003-845091/78. GENBANK; AY046414. Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

5; Page 8-9; 49pp; English. Claim

The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SSM3. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multipatiopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.

Sequence 431 AA;

The

The present sequence is the protein sequence of the glucan binding protein-B (GbB) of Streptococcus mutans strain 3VF4. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. Invention provides immunogenic compositions and vaccines for dental invention

New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammala against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immunogenicity; immune stimulation; glucan binding protein-B;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa

The present invention relates to a computational method (M1) for identifying adhesin and adhesin-like proteins, by computing the sequence-based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network (ANN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins an artificial neural network (ANN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins, having 274 fully defined 162-encoding adhesin and adhesin-like proteins, having 105 fully defined 306-18976 base pairs (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical genes encoding adhesin and adhesin-like proteins, having 105 fully defined 306-18976 base pairs (SEQ ID NO: 12-79); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 12-79); a set of 105 hypothetical adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (I) based on (M1). (M1) is useful for identifying and adhesin-like proteins, of therapeutic potential. And identifying and short-listing proteins for further testing in development of new vaccine formulations cueful for identifying putative adhesins that are important in drug discusses caused by various pathogenic organisms. (M1) is cueful for identifying putative adhesins that are important in drug distantly valuary and understant and uninary racet infections. (M1) identifies adhesins from distantly valuary and preventing therapeutics for whooping cough, pneumonia, and distantly valuary and uninary racet infections. (M1) identifies from the proteins and uninary racet infections. (M1) identifies in the proteins and uninary racet infections. (M1) identifies in the proteins and uninary racet infections. (M1) identifies in the proteins and uninary racet infections. (M1) identifies in the proteins and praventing the proteins and pravent
  Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gastric ulcer and urinary tract infections. (MI) identilies aumerable distantly related organisms, and from bacteria belonging to a wide phylogenetic spectrum. (MI) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             algorithm; adhesin; pharmaceutical; vaccine; drug screening; boodecella pertussis infection; antibacterial; pneumonia; antillematory; respiratory-gen; gastric ulcer; antiulcer; gastric ulcer; antiulcer; gastrointestinal-gen; urinary tract infection; antimicrobial; uropathic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                     New composition comprising a fragment of a glucan binding protein-B (dppB) that binds to MiC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ramachandran S;

ð

The present sequence is the protein sequence of the glucan binding protein—B (GbpB) of Streptococcus mutans strain 15JP2. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (WHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multicipitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. Taubman MA; Smith DJ,

WPI; 2003-845091/78. GENBANK; AY046413. Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. Claim 5; Page 8; 49pp; English.

The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 3SN1. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatiblity complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides,

ö ö The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention. New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of a antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation. The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5481 sequences (S1), given in the specification. The proteins have entil bacterial and antiinflammatory activity. [1], nucleic acids encoding (1), ABN66044-ABN71526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a biological sample. (1) is used to detect Streptococcus in a composition comprising (1) or a nucleic acid encoding (1), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN7126 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.

Sequence 484, Application US/10206576

Patent No. 6913907

GENERAL INFORMATION:
APPLICANT: Choi et al.
TITLE OF INVENTION: Enterococcus faecalis Polynucleotides and Polypeptides
NUMBER OF SEQUENCES: 497

CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
STREET: 9410 Key West Avenue
CITY: Rockville
STATE: Maryland
COUNTRY: USA
                                     Sequence 484, Application US/09071035

Patent No. 6448043

GENERAL INFORMATION:
APPLICANT: Gil H. Choi
TITLE OF INVENTION: Enterococcus faecalis Polynucleotides and Polypeptides
NUMBER OF SEQUENCES: 496
CORRESPONDENCE ADDRESS:
ADDRESSER: Human Genome Sciences, Inc.
STREET: 9410 Key West Avenue
CITT: ROCKYILLE
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 482, Application US/09071035

Patent No. 6448043

GENERAL INFORMATION:

APPLICANT: Gil H. Choi

TITLE OF INVENTION: Enterococcus faecalis Polynucleotides and Polypeptides

NUMBER OF EXQUENCES: 496

CORRESPONDENCE ADDRESS:

ADDRESSEE: Human Genome Sciences, Inc.

STREET: 9410 Key West Avenue

CITY: Rockville

STATE: Maryland

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 422;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6; Indels

Patent No. 6703491

GENERAL INFORMATION:

TITUE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

TITUE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

TITUE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

TITUE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

TITUE OF INVENTION: NUMBER: US/09/270,767

CURRENT FILING DATE: 1995-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 49543
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 34326, Application US/09270767

Sequence 34326, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094
CURRENT PALICATION NUMBER: US/09/270,767
CURRENT PILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 34326
LENGTH: 213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 22689, Application US/09252991A

Sequence 22689, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 22689

LENGTH: 596
Sequence 10276, Application US/09489039A

Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Preton et. al
APPLICANT: Gary Preton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US 60/4001
CURRENT PILING DATE: 2000-01-27

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 10,
